

AI AGENTS FOR YOUR WORKFLOW

AI agents that run your workflow. The first runs your projects, **from WhatsApp.**

Your team sends updates the way they already do. The agent writes them to your ERP, remembers the context, and logs every change. More agents follow.

OB

Operations — Site B

am2am agent in this thread

Maria · Ops · 09:14

Warehouse shipment slipped, won't make Wednesday. Pushing to Thursday 10am. 📦

THE PROBLEM

Work happens in chat. Nothing keeps it.

01

Your team lives in chat. Your work history doesn't.

02

Standups happen. Status updates don't.

03

You bought project software. No one logs in.

HOW IT WORKS

From a chat message to a system of record.

[Book a demo](#)

Chat where you already do

Your team uses WhatsApp, Slack, or Teams as usual. No new app, no new habit to build.

2

The agent writes it down

It reads each message, understands it, and writes a structured update to your ERPNext.

3

Context carries over

It holds context across days, projects, and people, so the next message picks up where the last left off.

4

Ask it anything

In the same thread: "what's pending from the warehouse team this week?"
